

Selected Partner Pilot Support Program

A selective pilot support program for partners who can apply MESH in real projects.

This program supports selected partners with one pilot site to validate the initial fit of MESH, continue real-site operation, and review follow-up collaboration based on accumulated data and feedback.

Target Partners

- Greenhouse builders
- Vertical/Container farms
- Complementary solution partners
- EPC / integrators

Selection

- Suitability review
- Up to 3 selected partners
- Reviewed in order of discussion

Support Scope

- Small Pilot Kit
- One pilot site
- Initial review after 8–12w
- 2y pilot operation

Pilot Conditions

- Pilot agreement / NDA
- Pilot-ready site
- Local installation, wiring
- and power readiness

Pilot Support Scope

AI Hub 1 • Control Box S 1 • FR/SW control channels up to 6ch • Air Nano up to 2 • MESH Link up to 1

Final configuration will be adjusted after checking the actual equipment, power, control method, safety conditions, and communication interface.

Provided by MANNA CEA

- Pilot hardware support under agreed pilot terms
- Initial configuration review and basic setup guide
- Remote technical support during the pilot period

Partner Preparation

- Applicable site and target equipment information
- Local installation, basic wiring, and power readiness
- Operational feedback and follow-up discussion

Follow-up Collaboration

- After the initial review period, MANNA CEA and the partner may discuss additional sites, formal BOM, pricing, supply and installation scope, and a long-term collaboration model based on pilot results and operating data.

Important Notes

- Pilot hardware is provided only for the agreed site, purpose, and operation period under a pilot agreement/NDA. Any use outside the agreed scope requires prior written approval.
- Shipping, taxes, local installation, field wiring, integration development, and connected field equipment are not included in the pilot kit and will be reviewed separately if needed.
